Subject: Re: IRIS Slides for Tomorrow

Thanks Sam. Let's make sure only public info is on the slides

Hi all,

Attached are the final slides for the IRIS presentation tomorrow. I'll make sure OCIR has this – OCSPP already has it.

Kris, I'm happy to screenshare and drive the presentation tomorrow, but if you feel more comfortable doing that yourself, that works too. Also below is some background info I got from OAR on NATA and RTR to keep in our hip pocket or mention orally.

-Sam

From OAR:

- Formaldehyde is a Clean Air Act (CAA) hazardous air pollutant (HAP).
- Nationwide, more than 1.3 million tons of formaldehyde is emitted to air each year; an estimated 42,000 industrial facilities emit formaldehyde.
- In EPA's national risk screening assessments of HAP, formaldehyde is one of the top cancer risk drivers.
- More than 44 source categories regulated listed under section 112 of the CAA emit > 8,800 tons/year of formaldehyde.
- In risk reviews of the CAA section 112 national emission standards, formaldehyde is often one of the risk drivers.
